## **FOOD WEB IMPACTS**

Using the Scenario Cards, analyze how each chosen Scenario Card could potentially impact your food web.

| Scenario Description  | Which organism is directly impacted? | How does this impact the overall food web?  |
|---|--------------------------------------|---|
| Prescribed burns improve primary producer health, preventing devastating fires. | Palmettos                            | Prescribed burns improve the health of palmettos, which in turn provides food for black bears, deer, etc., and habitats for the endangered scrub jay. |
|   |                                      |   |
|   |                                      |   |
|   |                                      |   |
|   |                                      |   |
|   |                                      |   |
|   |                                      |   |
|   |                                      |   |
